1. The drawings are objected to because the elements of Figure 2 must be labeled with descriptive legends. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 7-11, 14-18, and 21 are rejected under 35 U.S.C. 102(b.) as being clearly anticipated by Vanier.

Vanier disclosed a method for exciting resonance in a plurality of atoms at an atomic frequency of the plurality of atoms (Title), the method comprising the steps of frequency modulating (column 7, line 47; Fig. 7, "Microwave RF Generator") a coherent light source (Abstract "Coherent Population Trapping (CPT)") with a modulation frequency (Abstract "modulating a laser at a subharmonic") to provide a lightwave (column 6, line 57, "beam"), the lightwave having two coherent optical fields with a frequency separation substantially equal to the atomic frequency (column 5, lines 17-21); and directing the lightwave at the plurality of atoms (Figure 5 "115"; Figure 7 "CPT Optical Package") and changing the modulation frequency to adjust the frequency separation of the two coherent optical fields (column 8, lines 26-30; Figure 7 "loop 1"); and locking the modulation frequency when the frequency separation of the two coherent optical fields is substantially equal to the atomic frequency (column 8, lines 27-30); and frequency modulating

the coherent light source with a sine wave at the modulation frequency (Figure 7 "Microwave RF Generator"); and without using up-converting hardware (Figure 7 "Microwave RF Generator").

4. Claims 5, 6, 12, 13, 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Mis whose telephone number is (571) 272-1765. The examiner can normally be reached on Monday through Thursday.
